Click to Navigate

The **SitStat Monitor** Tool provides a situation status view about a wide range of information. Active incidents, units, stations, and/or available coverage - both by resource type and coverage map, can be examined in relation to any Marion County agency, as well as our neighboring county partners. By zooming in and out, different map icons, apparatus, and call information can appear or drop away to provide the user a clear, common operating picture.

Each icon is clickable to provide the user greater detail. The status of a unit, call narrative and address info, address & routing, among many other pieces of information can be accessed which may provide assistance to a company while responding to or on scene.

Use the **settings** menu to adjust what is viewed in the panel and on the map. There are separate tabs for **incidents**, **units**, **stations**, and **drivetime**.

Click to Open

Select Type

Adjust filters

Option	Action
Incidents	Incident categories you want to see on the map and in the incident list.
Units	Unit types you want to see on the map, and in the incident list. The agency unit selections also control drawdown.
Stations	Turn stations on/off on the map.
Drivetime	Select the Drivetime increment you would like to display on the map. Choose to show density and all agency or apparatus type selections for drivetime in this section.
